

To whom it may concern, I would like to express my concerns regarding the NAB's petition 04-160. I have been listening to XM radio for nearly 2 years, and to Sirius radio for several months now. I think that if they wish to use some of their limited bandwidth to broadcast weather and/or traffic information across the country, then they should be allowed to. I travel 30,000 miles/year or more in my car, and it will be very useful for me to be able to get up to the minute weather and traffic reports for the areas that I am driving to. I cannot get that with local radio stations, and I feel that it is wrong for these radio companies to try and put government pressure onto the satellite companies instead of improving their own services. Thank you very much.

A concerned citizen,

Jeremy Dobson
